### Exterior Fluoropolymer Applications

The new owners of Houston Industries Plaza faced a dilemma. The building's twenty-three year old anodized skin was dull, faded, and didn't match the newly renovated image. The solution was a complete on-site refinishing with PPG's Duranar ADS. This Kynar based paint was spray applied by THE LEE QUIGLEY COMPANY in ten months time. The 150' work platform assured a consistent application and a production rate to finish the project on schedule. Completed February, 1996.

Work in progress, East Elevation, Floors 33 and 34

### *Exterior Fluoropolymer Application*

The original 20 year old painted finish on the Greenspoint 3 Building, Houston –TX was badly faded and peeling. The solution was a complete refinish with PPG / Keeler & Long's Megaflon MS. A double-shift was implemented to expedite completion time. Completed 2002.

## architectural metal refinishing

To breath new life into a tired, bland building, the new owners of 2200 West Loop South in Houston, TX, decided to brighten the exterior. The Lee Quigley Company applied Megaflon MS by Keeler and Long PPG to achieve this modern new appearance.
